IT companies collaborate on m-payments

By James Ratcliff
11 February 2011

IT services provider Atos Origin and security company CASSIS International are working together to make mobile near-field communication (NFC) services available across Europe.

The two technology companies are seeking to develop services that banks, public transport operators and telcos can roll out to their customers.

Both parties have been developing NFC capabilities in varying ways. Atos has concentration on transaction processes and CASSIS has utilised its Trusted Management Services (TSM) solution to investigate the integration of the technology into SIM cards, SD cards and operating systems.

"This agreement will provide us with a unique opportunity to combine our TSM solutions with the capacity of Atos Origin to manage complex projects and operate critical transactional services for large accounts with high-spec SLAs in secure data centres," said Shin Jin Won, EVP for technology and services and CASSIS International.
